However, our understanding of the state of the science is that D4 does not behave comparably to known PBT/vPvB substances. According to the silicone industry's interpretation of the available data, the scientific evidence derived from field trials essentially indicates that D4 is not biomagnifying in aquatic and terrestrial food chains. SECTION 16: Other information

16.1	Information on the revision	Not relevant.
	Important literature references and data sources:	The partition coefficient of D4 between PDMS and water was determined as $\log K_{PDMS-water} = 7.09$. It follows that PDMS containing up to 3%w/w D4 produces a limiting thermodynamic concentration of 2.4 µg D4/L in the water phase. The critical 21d NOEC for daphnia of 7.9 µg D4/L is not reached. Therefore, the product is not classified for chronic aquatic toxicity.
